

Red Castle Training: Booking Form

July 2021

At Red Castle Training we believe that maintaining a high quality provision for learners means keeping groups small. This means that practical sessions can be delivered with relative ease and maximises the amount of support available to our learners. On this basis, our groups will usually comprise of a maximum of 8 learners. This can be extended for some courses dependant on the types of activities involved. We would be happy to discuss this with you.

The following applies as a general guideline but individual circumstances can be discussed.

Most courses will cost around £50 per learner per session. A session is from 10am until 2pm but again, individual circumstances can be discussed. This is based on 8 students attending each session. We also run 2 hour sessions at £25 per student. We can tailor days to suit smaller groups. Please contact us to discuss costing's for this. 1:1 provision for students is charged at £25 per hour.

Bespoke programmes can be created for individual Schools/Education Provider starting at £300 per day, based on 6-8 students.

For students attending short courses (up to 6 weeks) provision will be payable in full at the start of the course.

For all other courses, payment is due termly or monthly in advance. For courses that last the academic year, students provision will be payable for the full duration of the course. If a student is no longer able to attend a course, their place may be utilised for a different learner from the same provider without incurring additional cost.

From time to time we may take photographs of students which may go on the website or in the local press. We will not do this without the consent of the young person. Please let us know if students should not be photographed or photos should not be published.

Please always feel free to talk to us about any queries or concerns. We wish to help

Red Castle Training: Booking Form

July 2021

Course	Day Required	Number of Students	Total Cost for Day (For Office Use Only)
Arts Award Bronze			
Arts Award Silver			
ASDAN Animal Care	Monday	1	£50-00
PSHE/Employability Skills			
Other (Please Specify)	Thursday	4	£ 200-00
Amount Due (For Office Use Only)			£

Personal data including medical needs and contact details will be taken in the student's induction. If they will need support with this, please send this information in advance or attend with them for the induction. All academic and behavioural data should be returned with the student's assessments.

Ref Red Castle Training

Dear Sir/Madam,

As the Weobley ward Councillor, I would very much like to support the Red Castle Training facility at Emiley's Meadow, Weobley. This is a wonderful facility supporting vulnerable young people in Herefordshire and providing them with a much valued outdoor learning environment. The training, activities and learning that this centre provides is a fantastic experience for these children. The children gain qualifications and valuable life experiences which are so important for their development. This facility has been operating from this site for some eight years but had to install a class room when the teaching part of service had to be redirected. One only has to look at the positive outcome of children that have benefitted both academically and socially from their experience at Red Castle through the student feedback and leaver cards.

The on-site class room has added a tremendous value to Red Castle. It fits in well with the surroundings and environment and has incurred no extra traffic flow as a result of having this on site. In fact less traffic is now moving children around the village than on its previous two sites which helps with the environment and reduces emissions within Weobley. It must be noted that no letters of complaints have been brought to the parish since the classroom was installed with only support from Weobley residents and businesses.

Herefordshire has too many children in care and the Red Castle facility provides a valuable facility in helping reduce this number. Red Castle facilities and classroom must be maintained at all costs for the vulnerable children, families, staff, and Herefordshire looked after children. It is well none that children's mental health is coming under increased scrutiny especially at this particular time. Red Castle is helping to reduce and address this and it must not be taken away to the detriment of our young vulnerable people.

Kind Regards

Councillor Michael Jones

Position Statement - Development in the River Lugg Catchment Area April 2021 An Update

Developing Strategic Solutions

The **Nutrient Management Plan (NMP)** is currently under review. An update is being drafted by regulatory bodies which all key stakeholders have fed into, outlining measures being developed independently to improve phosphate reduction. This is now being refined by the statutory bodies; Natural England (NE), Natural Resources Wales (NRW) and the Environment Agency (EA). The purpose of the review is to provide an increased level of certainty around Phosphate reduction and timescales. It is anticipated that this review will once more allow it to be relied upon as mitigation for plans and projects. The review is understood to be reported back to the NMB at their next meeting, planned for May 2021.

Following the update on the River Wye published by NRW in December 2020, the review of the NMP now takes into consideration the failing wider River Wye catchment in Wales only, as well as the River Lugg catchment area in Herefordshire:

<https://naturalresources.wales/about-us/news-and-events/news/nrw-issues-new-advice-to-safeguard-the-river-wye-special-area-of-conservation/?lang=en>

An **Interim Phosphate Delivery Plan (IP)** is being developed by consultants appointed by Herefordshire Council, in consultation with NE, Stages 1 and 2 have now been completed. The following information is now available on our website from April 2021:

- A Non-technical summary for both Stages 1 and 2 (to follow shortly) of the IP.
- Stage 1 '*Guidance on Calculating Phosphate Budgets for New Development*' a detailed report.
- A Phosphate Calculator - enabling applicants and agents to calculate the phosphate load of a development and where appropriate the amount that needs to be mitigated.
- A You Tube tutorial on how to operate the phosphate calculator.
- Stage 2 '*Mitigation Options for Phosphate Removal*' detailed report

Stage 3 of the IP is now underway with ongoing consultation with NE. This stage will set out both the legal and planning processes required for securing mitigation to enable development to proceed, it is expected this stage will be completed by May 2021.

- If you require **support** in completing the calculator, we recommend, in the first instance, seeking the advice of a specialist consultant.
- The council may also be able to provide guidance through its pre-application advice:

<https://www.herefordshire.gov.uk/planning-services/planning-services-1/4>

- Natural England also offer a Discretionary Advice Service (DAS):

<https://www.gov.uk/guidance/developers-get-environmental-advice-on-your-planning-proposals>

Strategic Wetlands for Phosphate Mitigation

Herefordshire Council are currently working to develop a number of integrated constructed wetlands within the River Lugg catchment area. These wetlands will help to address both the existing water quality of the river and to deliver mitigation for phosphate from development.

Good progress is being made and the Council will provide further updates as these sites develop.

In the interim

On Natural England's advice, there remains potential for a positive appropriate assessment, where it can be demonstrated that development is **nutrient neutral** or would lead to **betterment** to enable development to proceed. Proposals will need to provide appropriate evidence of avoidance/mitigation measures. (Refer to Stage 2 of the Interim Plan for guidance).

Update to Criteria for Discharges to Drainage Fields

In relation to discharges to drainage fields in the red zone, Natural England have indicated that if all the following criteria are in place and can be evidenced, then phosphates would be unlikely to reach the river and therefore there is no pathway for impacts. With no pathway for impacts there is no need for further Habitat Regulations Assessment – Please note these criteria have been revised by Natural England in March 2021:

Proposed thresholds

Small discharges to ground i.e. less than 2m³/day¹ that are within the surface or groundwater catchment of a designated site will present a low risk that the phosphorus will have a significant effect on the designated site where certain conditions are met:

- a) The drainage field is more than 50m from the designated site boundary (or sensitive interest feature) **and**;
- b) The drainage field is more than 40m from any surface water feature e.g. ditch, drain, watercourse, **and**;
- c) The drainage field is in an area with a slope no greater than 15%, **and**;
- d) The drainage field is in an area where the high water table groundwater depth is at least 2m below the surface at all times **and**;
- e) The drainage field will not be subject to significant flooding, e.g. it is not in flood zone 2 or 3 **and**;
- f) There are no other known factors which would expedite the transport of phosphorus for example fissured geology, insufficient soil below the drainage pipes, known sewer flooding, conditions in the soil/geology that would cause remobilisation phosphorus, presence of mineshafts, etc **and**;

- g) To ensure that there is no significant in combination effect, the discharge to ground should be at least 200m from any other discharge to ground.

Further Update: The Frequently Asked Questions section on the council's website is due to be updated in **May 2021**.
