***Re: Land west of St. John the Baptist Church and Church House, Aston Ingham,
Planning Application No: 180603***

Introduction

Further to the correspondence received from Aston Ingham Parish Council, please find below further information with regards to the topography of the site. This short technical note forms an addendum to the original Flood Risk Assessment (FRA).

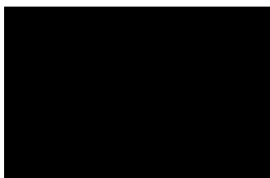

Site Topography

To clarify, the site slopes from north to south and west to east, the FRA confirms that the topography of the site slopes towards the Ell Brook from the western boundary of the site and not from the Ell Brook into the site. The site has an approximate 2% slope from north to south and a 2% slope from west to east. This is shown within the topographical survey of the site and the topographic cross sections of the river and site which has recently been undertaken, as shown within see Appendix 2 of the FRA.

Conclusion

We trust that the details presented herein are self-explanatory and clear. If, for any reason you should have any queries or comments, please do not hesitate to contact us.

Yours sincerely
