

Core Strategy Policy SS7 and SD1- Climate Change Measures compliance checklist

Background

On 8th March 2019, Herefordshire Council unanimously passed a motion declaring a Climate Emergency. This signalled a commitment to ensuring that the council considers tackling Climate Change in its future work and decisions taken. With this resolution came a county-wide aspiration to be zero carbon by 2030. From a planning perspective, it is therefore imperative that the council needs to demonstrate explicitly how the policies relating to Climate in the adopted Core Strategy, SS7 and SD1, are being fully taken into account in the decision making process.

Policy SS7 sets out how the plan will seek to address the impact that new development in Herefordshire has on climate change. It outlines how development proposals will be required to include measures which will mitigate their impact on climate change, at both a strategic level and through requiring such measures in design criteria.

Policy SD1 and its supporting text set out how new development will have to incorporate sustainability measures, and give consideration to climate change impacts through design. Alongside other aspects of sustainable design, in terms of climate change impacts, development proposals should incorporate the following requirements:

- *Utilise physical sustainability measures that include, in particular, orientation of buildings, the provision of water conservation measures, storage for bicycles and waste including provision for recycling, and enabling renewable energy and energy conservation infrastructure;*
- *Where possible, on-site renewable energy generation should also be incorporated;*

The policy's supporting paragraphs 5.3.31 - 5.3.33 elaborate on how this will be applied:

5.3.31 All developments must demonstrate how they have been designed and how they have incorporated measures to make them resilient to climate change in respect of carbon reduction, water efficiency and flood risk. Carbon reduction should influence design from the outset by ensuring the fabric of the building is as energy efficient as possible, for example, attaining thermal efficiencies through construction that achieves low U values and fuel efficiencies through the use of services such as efficient boilers. Good site planning can also aid greater energy efficiency in new development, for example, by seeking to maximise solar gain.

5.3.32 Revisions to the Building Regulations are introducing progressive increases in the energy efficiency requirements for new buildings. In terms of energy conservation, developments in sustainable locations that achieve accredited standards of energy conservation which cover a range of sustainability criteria will be supported, particularly where the level achieved materially exceeds the relevant Building Regulations and other relevant standards in place at the time.

5.3.33 Large-scale developments should demonstrate how opportunities for on-site renewable energy generation and sustainable waste management have also been considered and addressed within the design of the scheme. Such details should include an

appraisal of all suitable renewable energy technology. Other developments will also be encouraged to consider whether on-site renewable energy opportunities might be available. Alongside this, the council supports the provision of renewable and low carbon technologies within existing developments, subject to such proposals according with other policies of the Core Strategy.

This checklist has been prepared in order for applicants to demonstrate to decision makers that the policies have been complied with, in that sustainability measures have been incorporated in development proposals where possible. It should be submitted by the applicant as supporting evidence of compliance with the climate change mitigation criteria of policy SD1, supporting the objectives of policy SS7. In the event of non-compliance, sufficient justification would need to be provided as to why this is necessary.

In the absence of a completed checklist, weight will be given to the apparent lack of consideration to the incorporation of sustainability measures as recommended in Policy SD1. This may result in the refusal of permission if other material considerations do not outweigh their inclusion.

Guidance for applicants

All applications for all new build development (or at Reserved Matters stage if applicable) will need to submit information in the below table(s).

Some guidance is provided under headings in the tables as to what details are sought. If necessary, the written sections may refer to any further supporting documentation and/or drawings submitted with the application. Some measures may be not be viable or appropriate to incorporate on smaller scale proposals. However, where this is the case, it will need to be made clear in the reasoned justification.

Energy efficiency	
Please demonstrate how the proposal has been designed to achieve energy efficiency:	
<ul style="list-style-type: none"> For all of those ticked, please provide further details of these in the relevant box below. This can refer to supporting documentation if necessary. Where measures are not ticked (ie. not incorporated), please provide a reasoned explanation as to why they have not been in the relevant box below. This can refer to supporting documentation if necessary. 	
<i>Please tick where incorporated</i>	
Building orientation/Thermal massing (maximising solar gain)	<input type="checkbox"/>
Thermally efficient materials	<input type="checkbox"/>
Energy efficient heating systems	<input type="checkbox"/>
Heat recovery systems	<input type="checkbox"/>
Other(s). Please detail these below	<input type="checkbox"/>

Further details of **all** incorporated measures:

Reasoned explanation for all measures **not** incorporated:

The existing oil fired boiler system is to be retained and extended to serve the proposed extension.

Renewable and low carbon energy

Please demonstrate how opportunities for on-site renewable energy generation have been considered and addressed in the design of the scheme:

- For all of those ticked, please provide further details of these in the relevant box below. This can refer to supporting documentation if necessary.
- Where measures are not ticked (ie. not incorporated), please provide a reasoned explanation as to why they have not been in the relevant box below. This can refer to supporting documentation if necessary.

Please tick where incorporated

Solar (eg. photovoltaic or solar thermal panels)

Wind

Hydro

Geothermal

Biomass

Air source heat pumps

Ground source heat pumps

Water source heat pumps

Battery storage

Use of hybrid systems

Use of heat networks

Other(s) Please detail these below

☐

Further details of **all** incorporated measures:

South facing solar panels (Vollant) located on proposed garage roof connected to the house.

Reasoned explanation for all measures **not** incorporated:

Existing oil fired boiler to be retained to existing house

Enabling sustainable living

Please demonstrate how the design has enabled low-carbon ways of living and/or working by its future occupants where possible:

- For all of those ticked, please provide further details of these in the relevant box below. This can refer to supporting documentation if necessary.
- Where measures are not ticked (ie. not incorporated), please provide a reasoned explanation as to why they have not been in the relevant box below. This can refer to supporting documentation if necessary.

Please tick where incorporated

Provision for recycling / waste storage/composting

☐

Provision for bicycle parking / storage

☐

Travel plan

☐

Electric vehicle charging points

☐

Other(s) Please detail these below

☐

Further details of **all** incorporated measures:

Reasoned explanation for all measures **not** incorporated:

Existing domestic recycling/waste storage and bicycle storage is to be retained.
